

Preliminary list of the *Lepidoptera* of Sri Lanka

Ahmet Ömer Koçak¹ Muhabbet Kemal²

Abstract: Preliminary list of the *Lepidoptera* of Sri Lanka. *Cesa News* 79: 1-57.

Present paper deals with the explanations of the present situation and the future of the planned project on the *Lepidoptera* of Sri Lanka. Totally 1903 species of 58 families are listed with scientific names and synonyms. More than 300 publications are given as author index.

Key words: *Lepidoptera*, Sri Lanka, fauna.

Within the frame of the Entomofauna Project of the Cesa³, an updated specific list of the *Lepidoptera* of Sri Lanka is planned. For this purpose, more than 300 faunistical publications, as well as taxonomical revisional studies concerning the *Lepidoptera* of this island have been compiled and evaluated as much as possible (see references, p.47).

Number of the species of the *Lepidoptera* of Sri Lanka is mentioned as “2158”, but no related specific list published (Wijesekara & Wijesinghe, 2003), whereas the present incomplete preliminary list comprises 1903 species of 58 families, 88.18% of the 2158 known taxa (Wijesekara & Wijesinghe, 2003). Further, it is mostly controlled and updated from taxonomical and nomenclatural standpoints. We estimate that the published faunistic information should comprise more than 2500 species.

The publication, “*Lepidoptera* of Sri Lanka” has been planned as a long-termed study with illustrated faunistical and ecological results of the planned expeditions to this island, in collaboration with the native academic partners. The present temporary list will be a basis for the planned survey.

List of the Species of the Lepidoptera

In this part, 1903 species belonging to 58 families (butterflies and moths) are listed alphabetically. Authors and dates of publication of the species are generally updated. Latest nomenclatural and taxonomical changes are principally used. Synonyms are arranged in chronological order. Nomenclaturally unavailable names are marked with #.
